

NPS 100

On-site Wind Power for Europe:

Faced with a volatile energy future, governments around the world are re-examining their energy portfolios and resolving to create new solutions for a changing global energy landscape. With prices surging and a renewed focus on domestic power production, Europe is leading the way in embracing wind power and its many benefits from job creation to commercial competitiveness.

Wind farms are not the only answer. The space and investment required for utility-scale development precludes many from participating in the wind power revolution. Thus the growing demand for onsite wind generation at businesses, schools and municipalities striving to offset their power costs, become energy independent, and lower their carbon footprint.

Northern Power's mid-sized Northern Power 100 turbine combines proven gearless technology with a community friendly design that delivers quiet operation and ultimate reliability in the right sized package. The Northern Power 100's low height profile integrates into a variety of settings whether they are pastoral farms or suburban neighborhoods. From Alaska to Italy, our turbines have found homes in school yards, churches, supermarkets, manufacturing facilities, resorts, and business campuses, to name a few—where would you install a NPS 100?

Northern Power Systems: At the Cutting Edge of Wind Turbine Technology

Northern Power Systems has over 30 years of experience in developing advanced, innovative wind turbines. The company's next generation technology is based on a simplified architecture utilizing a unique combination of permanent magnet generators and direct-drive design. Our revolutionary approach delivers higher energy capture, eliminates drive-train noise, and significantly reduces maintenance and down time costs. Northern Power Systems is a fully integrated company that designs, manufactures, and sells wind turbines to the global marketplace. Northern is headquartered in Vermont, USA with offices in Boston, Massachusetts and Zurich, Switzerland.

Northern Power Systems works with various local regional partners throughout Europe to deliver turn key solutions for our global customers. Our partners are of a high caliber and capability and can offer tremendous value in addition to a great product. To learn more about the Northern Power 100 please call our European Headquarters at +41 44 307 3733.
